

ΕΦΗΜΕΡΙΣ: OR, A DIARY

{ ASTRONOMICAL
AND
{ ASTROLOGICAL

For the Year of Grace 1662.

CONTAINING

1. The Motions and Aspects of the Planets, and Eclipses of the Luminaries, Full Sea, &c.
2. An Astrological Account of what the Stars portend to these Islands the ensuing year.
3. A probable Demonstration of the Ascendent of *England* in general, & *London* in particular.

BY
JOHN GADBURY,
ΦΙΛΟΜΑΘΗΜΑΤΙΚΟΣ.

It is easier to Carp, then to Copy.

Aug. 3. 1661. Imprimatur. G. Wharton.

L O N D O N:

Printed by I. Cotes, for the Company of Stationers, 1662.

To the Honour of her SEX,
The most Vertuous, Discreet, and Truly Noble,
M^{rs}. DOROTHY BICKERS.
Felicity in both Worlds!

Honoured Madam!

That I approach you in this (not common) way, you may justly wonder: Yet being acquainted with your Noble Disposition, and knowing that you have Charity enough to forgive a far greater Crime, [if this be any] I shall not distrust the drying up of the Spring, which upon every Just and Honourable Occasion is freely open. Nor do I here prefix your honour'd Name in the Front of this poor Phamphlet, as a flaming Sword to defend my weaker Motions; or to claw or flatter with you: The first, were to cast a guilt upon my self, of which I am not conscious; the latter, were to play the Sycophant; a Thing, which as your Generous Disposition abhors, I likewise detest. I onely do it to testifie unto the World my Gratitude for the many and continued Favours I have been (and still am) indebted unto your Vertues for.—And having no other way to wipe off the many Engagements I am run in Arrears unto your Nobleness, I shall humbly request, that this Zealous Acknowledgement may prevail with your Goodness to delete my deeper Obligations; and that you will vouchsafe to accept this Mite from the thankful Hand and Heart of—

M A D A M!

Your most immutable Servant,

JOHN GADBURY.

Charles 2	1630	January 30 1648		

GOD SAVE THE KING

Why should the Frantick Tribe thus troubled be
That *Oliver* disgrac'd the Triple-Tree?
The Gallows was more properly his own,
Then ever *Britain's* sacred Crown and Throne.
And if't be lawful for to murder Kings,
Protectors (sure) may dance in Hempen-Strings.

A Table of Terms for the year 1662.

Return Days, or Days of Elfoyn.	Days of Exception.	Returna Brevium.	Days of Appea- rance.
Military Term begins January 13. ends February 13.

Quind. Mart. Nov. 24	Novem. 26	Novem. 27	November 28

The Law distinguisheth 'twixt man and beaſt;
Rewards the worthy, puniſheth the reſt;
And that proclaims its Eſſence nobly good!
Yet Accidents thoſe Vertues have withſtood:
For lately when the Rebels high did rage,
The Law protected th' Errours of the Age.
But now bleſt *CHARLES* is mounted on his Throne,
It is unauſt'd; gives each man his own.

January hath xxxi days.

Stand still, great *Jove*, in *Scorpio*! By thy Trine
With lovely *Venus*, make thy Friends to shine.
Let *Mars* his pranks play Northward: yet do thou
Keep Peace at home, and friendly speed the Plow
Of all our hopes. So shall the troubled Tribe,
(At *Englands* safety) shewres of Tears imbibe.

3164.
No Annals shall be writ, but
what relate
Thy happy influence both on
Church and State:
Thy Zeal to publick Order;
thy great Parts
For all Affairs of weight; thy
love to Arts:
(And to our shame, and his
great glory tell,
For whole dear sake, by whose
vile hands he fell.)
A death so full of merits, of
such price,
To God and man so sweet a
Sacrifice,
As by good Church-Law may
his name prefer
To a fixt Rubrick in the Ka-
lendar.
And let this silence the pure
Señs complaint,
If thy make Martyrs, we may
make a Saint.
Elegy on his death, written by a
learned hand at Oxf. ann. 1644.

February hath xxviii days,

This month's four Trines do equal its three Squares;
What one destroys, the other still repairs:
The Acts of all sorts at this time will be
Just like the Web of fair Penelope.
But Mars and U.

But *Mars* and *Venus* Quartile threaten wrong
Unto those Females that are great with Young.

[illegible]

~~FEBRUARY.~~ 1662.

New Moon the eighth day, at four afternoon,
First quarter the 15 day, at eight in the morning.
Full Moon the 22 day, at 11 in the evening.

The Moon seen the night after the change near an hour and half after the Sun is set: See the demonstration hereof in the after-discourse at large.

March hath xxxi days.

Mild gentle Actions do this moneth begin,
Deserving Persons Love and Honour win.
Strange Stratagems the new Moon brings to light,
And Justice turns some Treachers days to night:
And at the end, our Clergy injur'd be
With rash Reproaches, studied Calumny.

The Moon seen an hour
after Sun-set-
ting, through the next
day after the change.

April hath xxx days.

Sol Mavors squares, opposes splendida Jove;
Mars Quartileth, Sol hugs the Queen of Love:
Hence discontented Brains on work are set
To stir up Factions and Dissentions great;
And hence they are discover'd, hence they gain
The fruit of folly for their idle pain.

May hath xxxi days.

If fruitful *London's* Signe be *Gemini*,
And Planet ruling it be *Mercury*;
Then must she stoop, when they above are strook :
Here the Superiours cast a hateful look
Upon them both : Let *London* fear the dint
Of every thing that beareth mischief in't.

June hath xxx days.

The Stars portend a sickly Season now;
Distempers reign, Physicians scarce know:
And they that cannot tell their sick estates,
Must needs be doubly baffled by the Fates.
Oh doleful time! Time onely fit for Pray'r
Against Diseases, and contagious Air.

July hath xxxi days.

If *Chiron* were but good, *Sol's* Trine would vary
The evil of his being Stationary;
But being not, his Station may renew
The last months in schiets; and the other crew
Of angry Aspects, add unto the fire
Fresh fuel, for to make it flame the higher.

August hath xxii days.

Bear up, brave *Heroes*, for the Sextile Rays
Of *Sol* to *Jove*, creates some happy days
Unto these British Isle. No Brewers flings
Can make it Treason if we pray for Kings!
Celestial Arts do flourish, Truth appears,
And links the earth unto the heavenly Spheres.

September hath xxx days.

Blest Aspects cause blest Actions; and the smiles
Of Heaven, destroy the greatest Villains wiles:
And thus 'tis now: Fates Changelings cannot boast
That bold Usurpers ever-rul'd the roast.

The fatal third-day of this moneth was fair
When it made way for Britain's Son and Heir.

October hath xxxi days.

A jealous moneth *October* seems to be;
 For *Saturn*, *Jove*, and *Mars* with *Mercury*,
 Are now conjoyn'd: Some persons thunder high;
 And others (much too bold) give Truth the lye.
 Clouds of Contentions macerate mens Brains,
 And th^e Azure Sky is mask'd with Winds and Rains.

November hath xxx days.

November two most cruel Monsters bears:
 The horrid Powder-Plot was here contriv'd:
 The Armies black Remonstrance in't appears;
 In all respects a Treason longer-liv'd.
 The two Malignants now together strive,
 Let's pray no more such Treasons he may thrive.

December hath xxxi days.

Thus have we noted th' n mble turning year,
With all the various shapes that in't appear;
Or good or evil, pleasant or displeas'd,
Whenth' Planets frown, or when they are appeas'd:
Yet if men live but at the common rate,
They ne'er can cut the Gordian Knot of Fate.

The Use of this Table is thus :

EVery Planet (except the Luminaries) have two houses a piece ; as ♂, ♀ and ♄ ; ♀, ♂ and ♄ ; ♄, ♀ and ♄, &c. and they are known to be either Diurnal or Nocturnal by the Letters D. and N. against each of them. Note, a Diurnal Planet rejoiceth most in a house or signe Diurnal ; and a Nocturnal Planet the contrary : as for example ; ♂ in ♈, and ♀ in ♏. The third Column sheweth you in what signes and degrees thereof any of the Planets are exalted ; as ☉ in 19 ♈, &c. The fourth shews the Triplicity of the Planets by day or night, as ☉ and ♄ rule the fiery, viz. ♈, ♌, ♉ ; ☉ by day, ♄ by night, & sic in aliis. The 5, 6, 7, 8, 9. Columns shew the terms of the Planets, as ♄ in the first six degrees of ♈, &c. The three last Columns shew the faces of the Planets, which divide the signes into Decades, as by the Table appears. Note, a Planet in his house is strong by five dignities in exaltation by four, in triplicity three, in term two, in detriment one. The detriment of a Planet is opposite to his house, his house to his exaltation ; and a Planet is as much depressed in the one as dignified in the other.

A useful Astronomical Observation of the Moons shining, seldom to be seen.

ON the ninth day of February, being the day after the change, the Moon will shine above one hour and a half after the setting of the Sun that evening ; a thing not common to be observed. To demonstrate which, I do thus :

Considering the place of the Sun, and the Moons distance therefrom, I first suppose the time of her setting to be near seven a clock that evening, she being then but a day old : Secondly, I get the Suns place and the Moons, with their Declination and Right Ascension, &c. to the time supposed, and calculate as followeth :

	deg.	min.		deg.	min.
Loc. ☉. ♈.	33.	38.	Loc. ☿. ♈.	16.	54.
Declin. South	10.	57.	Lat. ☿. North.	1.	0.
Ri. Ascension	333.	39.	Decl. South.	4.	16.
Ascent. Diff.	14.	20.	Right Ascen.	347.	34.
Obl. Descent.	319.	19.	Asc. Diff.	5.	29.
Sun sets 5 h. 2 min. 44 sec.			Obl. Descent.	342.	5.

	deg.	min.
Obl. Desc. ☉	319.	19.
Obl. Desc. ☿	342.	5.

Difference | 22. 46.

which Ark of Difference turned into time, is 1 h. 31 min. 4 sec. and so long the Moon shines after the setting of the Sun the ninth of February this year ; and she sets at 6 h. 33 min. 44 sec. that evening ; had she changed at noon this day, she would have been seen at night. The Change in March will afford the same appearance. In March, April and May 1654. the Moon appeared so immediately after the Change ; but will not again from the times I here mention, until the months of March and April 1671. The reason hereof is, the Moon being in Pisces, Aries or Taurus, having North-Latitude, those signes having long Descention, and North-Latitude in the Occidental part of Heaven, always becoming South.

SECT. II.
A general Judgement of the Year.

I shall begin with the Figure of the Vernal Æquinox, and that is as followeth in the Meridian of London.

Judicium Astrologicum.

Intending no large Judgements on this years Revolution, I shall give you the Text of *Haly in judiciis Astrorum* upon several Positions of the Planets in the Figure, and this without much consideration of the concomitant Configurations of them, because it would take up the room I have appointed for another purpose: besides, the year in general is likely to be a year of Passion, not of much Action.

The State of the year predicted.

Si quando ♄ fuerit in octava domo, accident Mortes in animalibus, quæ sunt de natura illius Signi, &c. If when ♄ in a Revolution shall be posited in the eighth house, Deaths shall happen unto such Creatures which are of the nature of the signe in which he is. *Si signum fuerit humanum, morientur Senes & antiqui homines*: If ♄ shall be in a humane signe, (the first part of ♄ is held so to be of Astrologers) it denotes the death of ancient and honourable persons in that year.

Si quando ♃ fuerit in septima domo fortunatus, gaudebunt homines mulieribus & mulieres hominibus, & simul convenient: Sed si fuerit infortunatus ibidem, discordabunt & disconvenient, & inter se rixabuntur, &c. Jupiter fortunate in the seventh house, denotes much pleasure, and many rejoycings to happen between men and women; and that they shall meet and part merrily: But if he be infortunate, (as here he is, being retrograde in Scorpio, and in opposition of Venus) there will happen many discords and discontents between them; and instead of friendly jollity, they will be apt to quarrel with, and scoff at one another.

Si ♄ fuerit in quarta domo, emittet inde sursum, & ascendit ejus calor & mala natura ad omnes alios Planetas, &c. Mars in the fourth, emits his ill influence upwards, and his heats and evil dispositions ascend to the rest of the Planets; whence mischiefs of his nature will arise, but this toward the latter part of the year: and these his evils will be general to all those people that are subjected to the signe in which he is. This Aphorism points out much misery, sorrow and affliction to Holland, Scotland, &c. for Mars is in Cancer, their Ascendent.

Venus in Ascendente, erunt homines sani & robusti in suis corporibus, & habebunt gaudia multa, &c. Venus denotes men to be healthful and strong in their bodies, (by being in the Ascendent) and declares them to participate of many pleasures and delights: but this is a single testimony of good onely against a great many Arguments of evil; I fear therefore it will not fully take place.

Mercurius in Ascendente, erit bonus annus pueris, &c. Mercury in the Ascendent, argues a good year to Youth, and portends them to avoid or evade all occasion of prejudice and danger: they will learn their Bookswell, and betake them to their professions cheerfully, &c. but Mercury his being in a Quartile of Mars his Dispositor, will much darken and obscure these good effects;

The state of the year predicted.

effects; yet will not wholly eclipse them, because *Mars* respects the place he shoots his arrow at. *Si ☿ fuerit maleficus, significat malum statum scribis; & si fuerit infortunatus à ☿, committent fraudem regi, aut falsabunt Chartas vel sigillum regis:* If *Mercury* be ill posited; it argues the ill state and condition of *Scribes, Clerks and Secretaries*; and if *Mars* shall be the Infortunator of him, (as here he is) such Fellows will put frauds, deceits and cheats upon the King, and will be apt to counterfeit the Seal for the forging of Charters and Writings. So from *Mercury* we descend ad *Lunam*. — At si ☾ fuerit in duodecima domo, accident genti illius climatis, quod est signi in quo ipsa fixa rixae & inimitiæ ac lites: The Moon in the twelfth, denotes accidents to happen to the people of that Climate or Country, of the nature of the signe in which she shall be posited; viz. wranglings, controversies, enmities and strifes; and this therefore now, because she is in *domo Martis*; and being there in Conjunction of *Sol*, it may also denote many private and clandestine Treacheries, which will most assuredly be brought to light, and this to the honour of the King and Kingdom, and absolute destruction and ruine of the Undertakers. Doth not *Luna* transfer the light of *Sol* to *Saturnus*, Lord of the tenth house, and this by the most noble of Aspects, the Trine? But of this subject I have treated largely in my Treatise entituled, *Britain's Royal Star*; the dint of which Predictions, those fool-hardy Fellows, *Venner* and his addle-headed Followers felt to purpose; and this suddenly after that my Treatise was published to the world. Thus much for the *Vernal Figure*.

Summer begins when the Sun enters *Cancer*; which this year is on *June 10*. 21 hours, 26 minutes. P. M.

Autumn commenceth when the Sun toucheth the first point of *Libra*; which this year is on *September 12*. 12 hours, 28 minutes. P. M.

Winter initiates when the Sun comes to the first Scruple of *Capricorn*; and is this year on *December 11*. 0 hours, 7 minutes. P. M.

There will be no Eclipses visible this year in *Europe*: I shall forbear to mention those that are invisible, otherwise then what have already done in the *Kalendar*; and will therefore here to my Judgements of this year.

S E C T. III.

A probable Demonstration of the Ascendent of England in general, and of London in particular.

THE Doctrine of Ascendents of Countries and Cities, being the most necessary subject to consider in the discovery of the general accidents of the world, I thought it meet to gratifie the Students in this Learning with the following brief Essay toward the perfect knowledge thereof.

The Ascendent of a City (saith *Haly*) is that signe, *cujus ascensione quis incipit collocare primarium lapidem*, which ascends in the Horoscope at the laying the first stone thereof. And the learned *Ptolomy* adviseth Astrologers in giving Judgements of the accidents of a City, &c. to take knowledge of the Sun and Moon's place in the Zodiack which they were in at the laying of the foundation; but more especially of the Ascendent, that being the most principal Angle of Heaven.

But Astrology being in former days so imperfect, and such kind of Observations rare to be found, the thing is most impossible that way now to be discovered; we must therefore for the true discovery of Ascendents, observe in what years the black Events of Heaven have fallen upon any Country or City, and then compare them with the several Eclipses, Motions and Aspects of the Planets, and Comets that may in such years happen; and then by a concatenated experience, conclude of the true Ascendent. An Example of which, we will pursue in the Ascendents of *England* and *London*.

And if we curiously enquire what signe and Planet governs these British Islands, we shall finde that *Aries*, the first and most royal signe of the Zodiack, is their chief Horoscope or Ascendent; and *Mars*, the undoubted Lord thereof, the Planet that properly signifies them. Whence *Cardanus*, *Ptolomy*, &c. terms the Inhabitants thereof a most unlucky and rebellious people, very impatient and troublesome under their Kings and Governours. And their Judgements seem to be grounded upon the fieriness and intemperature of that Planet and signe.

But now against this Opinion, the learned *Schonerus* and *Pitatus* have argued, and willingly endeavoured to place *England*, &c. under the Coelestial Twins, viz. *Gemini*; and this not without some colour of Reason; for by a *Συναρμόνιον* in Astrology, it is

A probable Demonstration

is no otherwise then they assert: For *Gemini* is (most truly) the Horoscope of *London*, as I shall shortly prove, that brings the Metropolis of *England*. *Minibus* placeth these Islands under *Capricorn*, promiscuously with other Countries that lie North-west, when he poetically says,

*Tu Capricorne regis quicquid sub Sole cadente
Expiratum.*

Thus Englished in Camden:

*Thou Capricorn dost govern all
That lies to Sun at his down-fall.*

Howbeit, Reason seems to side with *Ptolomy* and *Cardanus*, who place *England*, &c. under *Aries* and *Mars*; and their first mentioned proof thereof is not incongruous, but proper; for more rebellious and unlucky wavering men are no where to be found. Besides, it is remarkably eminent, that there never happens any memorable Eclipse or Conjunction in *Aries*, but the effects thereof are most certainly to be found in *England*, as History and our late dear-bought experience do abundantly testify. It were an almost endless Task to instance in all Examples; yet take some Testimonies thereof: When *Saturn* was in *Aries* in 1644, there, making a Conjunction and Opposition with *Mars*, all *England*, chiefly the East and South-east parts, were visited with the Plague; and then it was that our unnatural intestine Wars were at the highest. Upon the Effects of the Sun's Eclipse in *Aries*, March 29 1652, such Renovations happened in *England* in general, that the Child yet unborn will have cause sufficient with sorrow to remember: I need not tell you how that the Government of *England* was turned upside down, and things of the most signal consequence were carried on by a strange and prodigious *Interregnum*. And when *Saturn* was in *Libra*, the opposite signe to *Aries*, in the years 1658, and 1659, how did the Mountains travel all the times? how many changes of Government? Sometimes a Rump, sometimes Army, sometimes Committee of Safety, sometimes the Lord Mayor and Common-Council of *London* were chief; every one had a snap at the Government, as Dogs

of the Ascendent of England, &c.

Nose of a Bear. But God be thanked, these Throws and things did but accelerate the birth of *Englands* happiness. To prevent tediousness of discourse, I shall give you a short Table of *Saturns* passing through *Aries* from the year 1555. to this present, and from hence to 1675.

h in V from	February 28. 1555.	> to <	April 24. 1557.
	April 6. 1584.		June 8. 1586.
	February 15. 1614.		April 12. 1616.
	March 26. 1643.		May 23. 1645.
	January 30. 1673.		February 25. 1675.

Of all which Transits, and his Conjunctions and Oppositions with *Mars* in *Aries*, except the last, History will sufficiently declare their Effects: for the last, we must wait the time until its Effects come, viz. in the years 1673. 1674. 1675.

But now let us come to *Gemini*, the Ascendent of *London* in particular: and herein (not to go too far back) we may take notice that *Saturn* and *Mars* made a Conjunction in *Gemini* in the year 1648. at which time there happened not only a very great plague in *London*, but a cruel contention between the Army and City, there happening then an insurrection near *Guild Hall*, and many persons were therein slain: at last the City is conquered by the Army. In 1652. *Mars* was in *Gemini*, but this corresponded with the Eclipse of the Sun in *Aries* before-mentioned. In May 1654. *Mars* was in *Gemini* again, and then a pretended High Court of Justice is contrived; which in the beginning of *July* condemned Mr. Gerard and Mr. Vowel under pretence of Treason, but purely and truly for their Loyalty. March and April 1658. *Mars* enters *Gemini* again, then pretended Plots against the Usurper were said to be discovered; another thing called a High Court of Justice erected, and Sir Henry Slingsby and Doctor Hewyt (by their bloody Order) murdered; many Fears and Jealousies in *London*, and in other parts of the Nation. In the year 1659. from the month *August* to the latter end of *March* 1660. *Mars* was in *Gemini*; and the troubles that then were, each particular person in these Nations, cannot but readily remember; and this was at the time of one of his miraculous and strange Transits, and therefore were its Effects the more violent; it is not commonly natural to him to be above six weeks in a signe, but here he was seven moneths, viz. from

A probable Demonstration

from August 15. 1659. to March 22. 1660. Of Mars his dangerous Transits through Gemini, and its opposite signe Sagittary, and Saturna passing through the same signes, take the following Table, and compare the same with the Actions of those years, and it will readily result, that the signe Gemini must most probably be the Ascendent of London.

1559 ♂ in ♊	February 10	September 8
1560 ♀ in ♋	February 21	April 12 1561
1565 ♂ in ♋	August 4	March 9 1566
1573 ♀ in ♊	Novemb. 11	Novemb. 12 1576
1580 ♂ in ♋	August 21	March 24 1581
1589 ♀ in ♋	April 19	May 29 1591
1591 ♂ in ♊	February 6	August 24
1597 ♂ in ♋	Decemb. 15	March 1 1598
1601 ♀ in ♊	Decemb. 22	Decemb. 17 1601
1606 ♂ in ♊	February 12	Septemb. 11
1612 ♂ in ♋	August 9	March 15 1613
1618 ♀ in ♊	May 28	March 19 1621
1627 ♂ in ♋	September 1	March 19 1628
1632 ♀ in ♊	October 30	October 28 1635
1638 ♂ in ♊	February 12	September 5 1638
1644 ♂ in ♋	July 1	March 5 1645
1647 ♀ in ♋	June 16	May 17 1650
1653 ♂ in ♊	March 10	Septemb. 21
1659 ♂ in ♋	August 15	March 21 1660

Although in this Table you have the days of the Planets Intrats and Exits to and from those two signes Gemini and its opposite; yet their Retrogradations have sometimes cast them into other signes, though not very far, nor for any long continuance. Now, it is not onely in the frowns, but smiles of heaven, that the Ascendents of Cities are discovered: for proof of which, let it be remembered, that in the year 1633. when Jupiter was in Gemini, the repair of St. Pauls Cathedral was eminently followed, though began a little before, by the late Archbishop of Canterbury. The Buildings in Covent-Garden about this time began. There was much prosperity and happiness among all sorts of people; Trade very high; and the City magnificently feasted the King and Queen at Guild-Hall. And when Jupiter

of the Ascendent of England, &c.

was in Gemini in 1645. England hath cause to mourn when it remembers how London was then glutted with success, it being then the time of the late g. and and to be abhorred Rebellion. Anno 1656. Jupiter was again in Gemini, and then there were near thirty Churches in the City repaired; Trading mightily increased.

If the Smiles and Frowns of Heaven are most remarkable to London when such eminent Transits happen as before have been noted, then may we with much probability affirm, that Londons true Ascendent is Gemini. Much more might have been said to this business; as to the part of the signe or degree, by considering the Stations of the Planets therein, and Eclipses and great Conjunctions, &c. near the same places: but my room being somewhat too narrow to adventure any further at this time, I shall forbear all further scrutiny into the matter, hoping that this Essay will stir up some more able Pen either to supply my defects herein, or confirm the truth of what I have written by some other eminent Example.

C O R O L L A R I U M.

I hath been probably proved, that as London in particular is under Gemini and Mercury, England in general is under Mars and Aries. If then it be true, that England is governed by a Kingly Planet, and hath a most royal signe for its Horoscope, how super-sufficiently mad have the English shewn themselves in endeavouring to destroy a Kingly Government? Where Monarchy is naturally agreeable to a Kingdom, in vain do the Subjects thereof endeavour its extirpation: If God and Nature appoint or constitute a Government, Mens inventions will prove too weak to dissolve it. True it is, they may struggle, and perhaps for a season darken the most glorious Statutes of Nature, but can never totally confound them. As the Moon in an Eclipse (*pro tempore*) doth lose her wonted Claritude and Brightness, and recovers it again; thus it is in natural and truly essential Governments.

Let us read the Annals of England, and seriously thence observe the Genius and Disposition of the people inhabiting it; and we shall find there is no Species of Government that better (or indeed so well) suites with their Natures, Temperatures,

Con-

A probable Demonstration

Constitutions and Customs, then that of *Monarchy*. Hence it was that Sir *Tho. W.* would have perswaded *Oliver* the Usurper (perhaps out of no great love or respect to him) to have taken upon him the title of *King*: alledging, that that title was best known to the Laws of the Nation, and most suitable to the people.

Besides, we have tryed all other Governments: we have had *Presidials*, *Vicegerents*, *Lieutenant-Generals*, *Parliaments*, *Free-State*, *Protectors*, *Major-Generals*, *Rumps*, *Committees*, *Safety*, &c. but how uncouth and disgusting all them have been to the three Nations, let the world about us judge, who have with amazement and wonder beheld our Confusions. *Britannia ab initio mundi semper fuit Regia, & Regim. n. illius simile ille salum*; Britain from the beginning of the world hath been Kingly, and her Government like that of the Heavens: it is impossible therefore, that she can remain in safety, peace and quiet under any other Government, either *Oligarchical*, *Aristocratical*, or *Democratical*. If the Body Natural have two Heads or Hearts, &c. we always deem it monstrous; if the Body Politick have so, can we think it less strange? The learned Captain *Wharton* confirms the truth of the Parallel elegantly, thus:—

*The Rational Soul performs a Princes part,
She rules the Body by Monarchick Art:
Poor Cranes and silly Bees, with shivering wings,
Observe their Leaders, and obey their Kings.
Nature her self disdains a crowded Throne;
The Body's monstrous hath more Heads than one.*

The ill Consequents that attend a Kingdom removed from its true Basis of Government, may teach us to embrace that which is essential to it. Hath not *England* by opposing (and afterwards murdering) her King, been made an *Abeldama*? Have not her stately Palaces, and most glorious Structures been turned into Desolation and Ruine? Her Plenty into Penury? Free Trading into most dangerous Hazards? How many Blanks might we have found for a Prize? And whereas under a *Monarchy* we sat (and now do again) every one under his own Vine quietly; Lo! while we were without a King, the Bramble was continually scratching and tearing us. Oh what vertuous things have Free-Quarrel

Of the Ascendent of England, &c.

Publick Faith, Excise, Decimation, and 120000 l. per mensem been to *England*, in comparison of a trivial Story of Ship-money? All which things prepondered, plainly prove, that unlimmed *Monarchy* is far better for *England* than the most moderated *Democracy* can be.

To conclude: *England* is now a Kingdom again; and let us but behold with what Spring like faces all sorts of persons look by reason thereof; whereas before their countenances were overclouded with confusion, sorrow and dejection. And this glorious Return was no more then what our martyr'd and murdered Sovereign King *Charles* the first, by a prophetick Spirit foresaw, as is apparent by the mercy he procured for Colonel *Thomlinson* twelve years before he needed it; the Colonel having extended some more then ordinary Civilities unto him in the time of his sorrow and affliction.

Behold th' Effects of Loyal Courtesie!

Ε Π Ι Α Ο Τ Ο Σ to my Book.

And now, my Book, farewell: thou must not be
Tid always to thy Nurses Company
'Tis time to try thy Legs; thy self but shew,
Both Court and Country quickly will thee know.
Go, sport abroad; ne'er fear the frowns of Fate;
Contemn Squint-Eyes, and scorn an ignorant Hate.
If any man shall envy thy smooth brows,
And cast out words that judgement disallows;
Or Ape thee, (as some did thy Predecessor;)
Shine in thy brightness, shew their Malice less;
For those that swear 'tis Mid-night when it's Noon,
Are onely Cus that quarrel at the Moon;
Give such a kick; thy oney Pride shall be
To lash such lavish-levell-Garrulity.
But still be sure to Loyalty attend;
'Tis happy so to live, blest so to—

E. N. D.

In Epistle line to read Notions. In March's right hand page read, The Moon seen above an hour, &c.

A Catalogue of several Treatises written and made publick by J. G. the Author of this Book.

1. **A** Stronomical Tables of the fixed Stars, made to continue for near fifty years yet to come; useful for Astronomers, Astrologers, Physitians & Navigators.

2. *Cœlestis Legatus*: or, The Cœlestial Ambassadour; being a Discourse of the many Conjunctions in September 1656. in *Virgo*; together with something of the Crisis in Diseases.

3. The Doctrine of Nativities; handling all the necessary parts of Astrology, both Calculative & Judiciary: more compleat & perfect then any in the *English tongue*.

4. *Natura Prodigiorum*: or, a Discourse touching the Nature and Effects of Prodigies, with a Chronologie of the most remarkable of all kinds, for 1600 years last past. Also, a Treatise of the vanity of Sigils, Lamens, Spirits, Prophecies, the Chrystal, &c. by way of Appendix.

5. *Nuncius Astrologicus*: or, An Astrological Decision of the great Controversies between the Kings of Denmark and Sweden.

6. The King of Swedens Nativity, wherein his death was Astrologically predicted.

7. The Nativity of King Charles the first of blessed memory wherein is presented a brief History of our late miserable times.

The Examples of Nativities of different kinds (as oft by me promised) will shortly be made publick.

A rare Secret in Physick, most proper for the cure of the common Diseases of the Bowels, (now reigning) as also for Agues, Fevers, madness, &c. and all Diseases incident to women, by that famous Artist Dr. Nicholas Culpeper, to his Widow *Alme Culpeper*, (now wife to John Heydon Esq;) who liveth at door to the Red-Lyon in Spittle fields, and hath of late experimented the said Secret to the cure of many in London whom Physicians have left off as incurable.

From my Study in Aldersgate-street,
over against the half Moon.
